

Dataset Analysis Dashboard

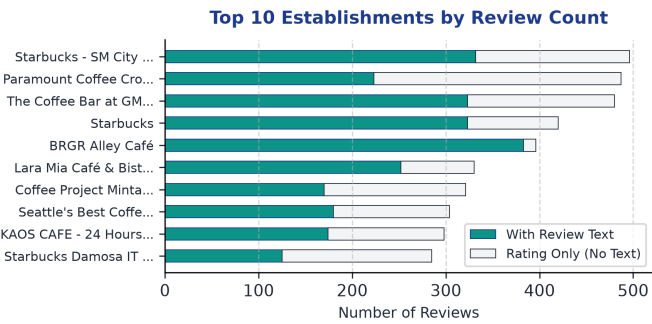

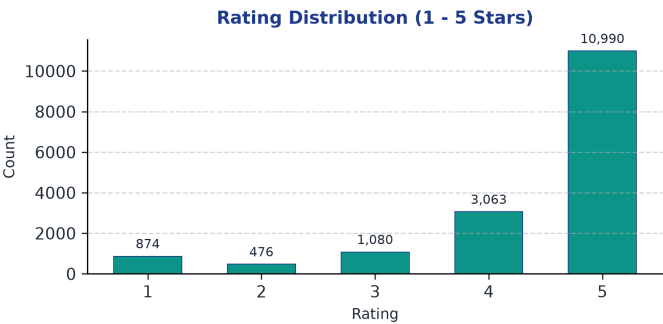

Aspect-Based Sentiment Analysis (ABSA) Dataset Overview

This report provides an automated analytical breakdown of the CSV datasets collected for the Aspect-Based Sentiment Analysis project. The dataset is split into Coffeeshops and Matcha Shops categories, containing localized reviews with geographic coordinate attributes and rating scores.

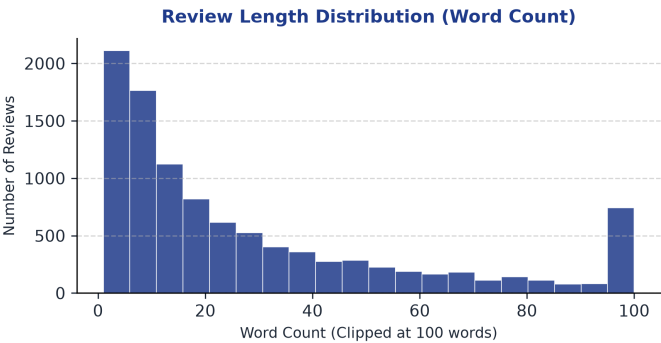

Key Dataset Metrics

Metric	Value	Description
Total CSV Files	334	Total independent business files processed.
Unique Establishments	322	Distinct places named in files.
Total Dataset Rows	16,483	Combined rows across all files.
Rows with Review Text	10,318	Reviews containing clean textual data.
Rating-Only Rows (No Text)	6,165	Empty or missing review texts.
Average Rating	4.38 / 5.0	Mean rating of all reviews.
Average Rating (With Text)	4.27 / 5.0	Mean rating of reviews containing text.

Rating and Volume Visualizations

Review Details & Length Analysis

Establishment	Reviews	Avg Rating
Starbucks - SM Cit...	496	4.43
Paramount Coffee C...	487	4.30
The Coffee Bar at ...	480	4.71
Starbucks	420	4.34
BRGR Alley Café	396	4.79

Dataset Observations

Observations & Analytics Summary:

- The rating distribution shows a significant positive bias with a high volume of 5-star ratings.
- Approximately 37.4% (6,165 rows) of the dataset consists of rating-only reviews without text. For Aspect-Based Sentiment Analysis, these rows must be pre-filtered out since they lack textual contexts.
- The average review text contains fewer than 30 words, which is ideal for targeted aspect extraction.
